

Product Canvas

DeliverEase

Boyalla Sri Sai Kowshik Reddy

Epic

Epic: Develop a mobile application that allows typical food delivery app users to find the best deals by comparing prices and wait times between all registered food delivery applications for a particular item from the desired restaurant.

Feature 1: Creating a login and Registration screen that takes the user's personal details and stores them. Uses these details to authenticate users for future logins to access the Deliver Ease account.

Feature 2: Creating a screen/page which is used to set up the Deliver Ease account. This setup page takes all food delivery applications information (log-in/account details) that users frequently use.

Feature 3: Creating a home screen that contains a search option and some other important buttons. Search is used to enter a restaurant or food item name. Buttons are used to navigate across app such as order history to display previous orders, favorite orders to display favorite orders etc.

Feature 4: Implementing a logic that is used to pull the latest data from all food delivery applications (by using entered account details) based on search requests.

Feature 5: Creating a search result page to list down all search results that came up from the various food delivery applications. Create a filter which contains 3 options – sort by price, time, or availability.

Workflow

Product Success Metrics

- Number of active users to measure the application's popularity.
- Number of conversion of orders per account to measure the usage.
- Number of app's premium version upgrades to measure the growth.
- Number of delivery services association per account to measure the highest partner integration.
- Number of feedbacks and reviews to measure the customer satisfaction and understand user expectations to improve the application performance.
- Measure per day user interactions and duration of the interactions, number of cart creations within the app to know about the user engagement to improve recommendations.
- Measure the usage of voice assistant per account to know the applications reach.

Big Picture

- The Deliver Ease application's main goal is to help the food delivery app users by fetching information from all linked food service applications and displaying details based on user needs to ease the comparison and ordering process.
- This application fetches the data by using the user's actual delivery accounts information, so the data is more reliable and effective.
- Preparing the cart and submitting orders is quick and easy compared to the normal process of ordering in food delivery applications.
- Effective search engine which pulls all relevant information based on the user inputs.
- Finding the best deals across the applications is simple which can result in saving a lot of money for users, increases number of orders, new jobs for the delivery services and aid in growth of economy.
- This App is designed for everyone. Even uneducated and disability people can use voice assistant and make orders easily.

Storyboard

The time is around 2 PM. Steven is feeling so hungry but confused - what to order? From where to Order? So, he thought to Log in to the DeliverEase.

Don't know where to start. So, he just decided to search for his favorite food item (Pizza) using the 'Search Option'.

Interesting results came up!! He selected his favorite food item (Chicken Pizza) from XYZ restaurant.

Comparing prices and wait times. Choosing the best deal for order. Found 50% off on the item from a UE food App.

After that, he added that item to cart page. Checking the items one more time before ordering. Cart is ready now.

Finally, placed an Order by clicking on the 'Submit Order' button. Saved a lot of time, money, and energy.

Product Name, Vision, and Goal

Product Name: DeliverEase

Vision: DeliverEase application is a cloud-based online application that works as a comparative price checker for food delivery services by comparing prices and wait times between various food delivery applications.

Goal : The main goal of this product is to centralize all delivery services information and recommend the best deals to the user based on their needs. This application can list down the best restaurants based on food preference concerning either the best deal or faster delivery or coupons. This reduces a lot of manual complexity of checking every food delivery service and comparing details. This is a one-stop solution for all food delivery user's problems. The goal of this product is to improve user experience by finding the best deals and making effortless food orders.

Big Picture

Steven Gilbert

Age: 17

Occupation: Student

Location: College Station

Hobbies: Photography, Loves playing football.

Customer Profile: An undergraduate student who is currently pursuing Management Information Systems at Texas A&M University. He is busy with his hectic coursework. Oftentimes use food delivery applications to order food items from nearby restaurants to save time. He is only interested in ordering from very few particular restaurants, probably the best customer for those few restaurants. Sometimes he is confused about coupons and the way they work in applications.

Motivations

- Save money and time.
- Easy to find and apply coupons.
- Order food items quickly and easily.

Goals

- He needs information about all available restaurants and the best deals for each restaurant.
- He wants to get notified whenever the selected restaurants are available for delivery.
- He wants to search which restaurants are serving his favorite food items and know about the prices.

Frustrations

- Hates searching and finding the best coupons across applications.
- Easily gets bothered when his favorite restaurant is not available.
- Relies on food delivery apps during hectic days and spends a lot of time making right orders.

Food Delivery App- Accounts

- DoorDash
- UberEATS
- Grubhub
- Postmates
- Instacart
- AggieFood.com
- ChowNow

Michael Penna

Age: 35

Occupation: IT Employee (Manager)

Location: Austin

Hobbies: Reading Novels, Painting

Customer Profile: An IT Employee who is working in a senior position as a manager at Salesforce company which is located in Austin. As a busy employee, he frequently uses online food delivery services to order food during the afternoon while working. He wants to get orders to be delivered as soon as possible. As he is busy with his tight schedule throughout the entire day.

Motivations

- Punctual and loves to do tasks on time.
- Order food items without spending much time.
- Loyal and Respects transparency.

Goals

- He wants to know which restaurants in which food delivery service can deliver the food faster.
- He wants to save an order of one day and wants to repeat the same in the upcoming days if needed.
- He wants to find out the best deals and coupons that are available in each food delivery application.

Frustrations

- Hates when an order takes extra time to deliver than ETA.
- Hates when ordered items are not in expected (hot & fresh) condition.
- Making a value-for-money order by searching & applying coupons consumes one part of the day.

Food Delivery App- Accounts

- DoorDash
- UberEATS
- Postmates
- Grubhub
- Instacart

Matthew Sell

Age: 75

Occupation: Farmer

Location: College Station

Hobbies: Listening to Songs, Going out for walks with pets

Customer Profile: A farmer who is living alone in his own house which is located in College Station. He loves technology even though he is not educated. He mostly uses voice assistant on his mobile phone to do various tasks (to call, message, etc). He sometimes orders food using food delivery services but faces a lot of difficulty in ordering. He is a foodie and loves to try different foods.

Motivations

- High Quality, good food.
- Always willing to try new things.
- Use technology for day-to-day tasks.

Goals

- He wants to know the best deals and order food items by just talking to a voice assistant.
- He wants to know about various types of food varieties that can be ordered easily within the college station location.

Frustrations

- Hates when ordering food items requires a lot of steps.
- Easily gets bothered when he has to pay more for deliveries.
- Relies on voice assistant. Hates when they just don't work as expected.

Favorite Coffee Beans

- DoorDash
- UberEATS
- Instacart

Epic

Epic: Develop a mobile application that allows typical food delivery app users to find the best deals by comparing prices and wait times between all registered food delivery applications for a particular item from the desired restaurant.

Feature 1: Creating a login and Registration screen that takes the user's personal details and stores them. Uses these details to authenticate users for future logins to access the DeliverEase account.

Feature 2: Creating a screen/page which is used to set up the DeliverEase account. This setup page takes all food delivery applications information (log-in/account details) that users frequently use.

Feature 3: Creating a home screen that contains a search option and some other important buttons. Search is used to enter a restaurant or food item name. Buttons are used to navigate across app such as order history to display previous orders, favorite orders to display favorite orders etc.

Feature 4: Implementing a logic that is used to pull the latest data from all food delivery applications (by using entered account details) based on search requests.

Feature 5: Creating a search result page to list down all search results that came up from the various food delivery applications. Create a filter which contains 3 options – sort by price, time, or availability.

Features

Feature 6: Creating a screen/comparison page that displays a comparison of prices and wait times once after selecting a specific food item from the search result page.

Feature 7: Allowing the users to select different items from the restaurant and providing the flexibility to add items to the cart page. Users can view the cart by clicking on the cart icon.

Feature 8: Upon finishing the order, transfer the cart from DeliverEase to the selected delivery service and open that app. (The order can be confirmed by clicking on the submit order button on the cart page).

Feature 9: Creating a voice assistant option in the application to perform certain requested tasks based on voice commands/inputs. Users can interact with the voice assistant by clicking on the mic icon which will be available on the home page of the application. Users can complete orders just by talking to the voice assistant.

Feature 10: Allowing the users to enable 'Notify me when available' option for favorite restaurants to get notified whenever that restaurant is available (open) again. Creating a screen to display favorite orders of user which we were selected as favorites while placing the order / creating the cart.

User

Workflow

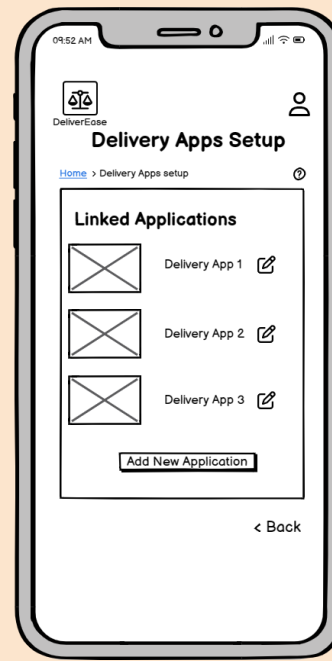

This is the log in page of the DeliverEase application. Users can use sign up option to create a new account and log in option to log into the existing account. This page contains forgot password option as well which can be used whenever user forgot his/her password. This page contains help button as well to interact with company.

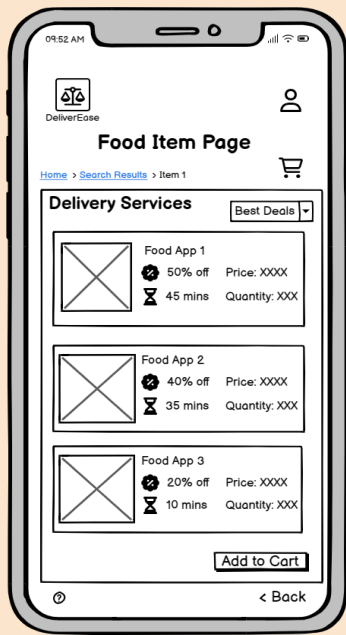

This is the Home Page of the application. Users can use this page to access Setup food delivery services button, check order history and favourite orders. Users can use search option to search for their favourite food items and restaurants to find best deals and wait times. Users can access voice assistant option and place order easily. Users can access their profile by clicking on user icon located at top right.

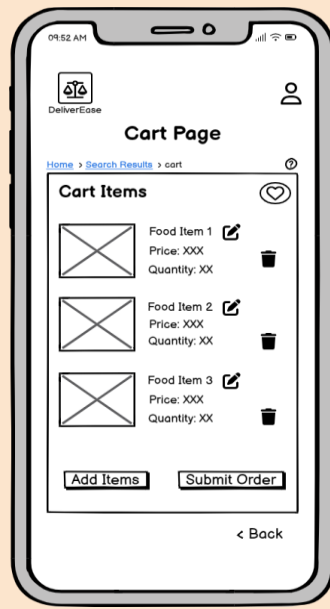

This is the Delivery Services setup page. Users can access this page by clicking on 'Delivery Apps Setup' button on home page. Users can use this page to view all linked delivery applications details and can edit if required. Users can link a new delivery application by using the 'Add New Application' button.

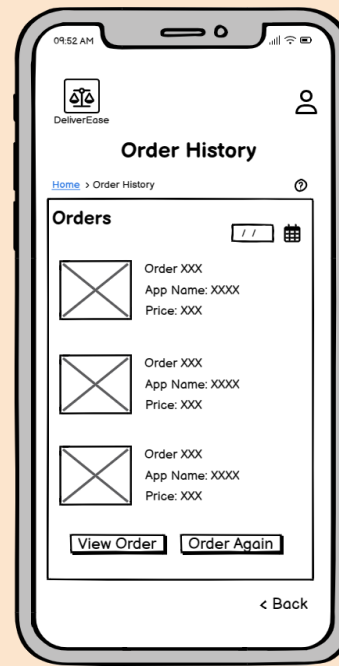

This is the Search Result Page. Users will land into this page as soon as they use search option to search for an item/restaurant. Based on the search input, this page displays relevant results which were gathered from all linked deliver services. These results will be categorized as Top Picks which displays best deals for the item, and Famous Restaurants which are popular restaurants for that item.

This is the Food Item Page. Users will be redirected to this page as soon as they select any option (item) from the search results page. Users can view all best deals, wait times for the items from the all linked delivery services. Users can use the filter option to filter the results based on the needs. Users can add item to cart page by selecting a food delivery service.

This is the cart page of the application. Users can access the cart page by clicking on the cart icon which is located on the food item page or search result page. Users can view all selected items (cart items) in this page and make changes (edit, delete) if required. Users can use the Submit Order button to submit/transfer the order to the selected delivery service and place an order. Users can use the Add Items button to add more food items to the cart page.

This is the Order History page of the application which can be accessed by clicking on the Order History button located on the home page. Users can view all previous orders in this page and can access the details of each order by selecting an order and clicking on the view order button. Users can use the order again button to order (repeat) a specific order again now.

This is the Favorite orders page of the application which can be accessed by clicking on the Favorite Orders button located on the home page. Users can view their marked favourite orders in this page. Users can search their favourite order by using the search option, unselect as favourite by unselecting (clicking) on the love icon next to it. Users can use the Order Now button to place an order now if the available status is 'Yes' for that order.
